Fluido® AirGuard System
Safety Precautions & Alarms

Caution!

Read the instructions for use

Make sure that the pressure does not exceed 300 mmHg. Do not use a (manually) operated pressure device without a pressure indicator.

Fluido® - When an alarm occurs

If an alarm sounds, press the audible alarm suppression button to suppress the alarm for three minutes.

Press the temperature setting buttons (+/-). The alarm code will appear.

Press the temperature setting buttons (+/-) together with the flow/volume button for 2 seconds to reset the device.

Fluido® Air Guard - When an alarm occurs

If an alarm sounds, press the audible alarm suppression button to suppress the alarm for three minutes.

Remove the air and/or the foam until the deaeration chamber is filled with IV fluid completely. When the alarm continues, check the device.
